

M21 File Naming Conventions

All file names should follow this format:

ExperimentID_SubjectID_TaskID_DataType

Experiment ID is a 3-character code that tells us which experiment the data was collected for. Currently the lab is only running one experiment, Morph21, so the only Experiment ID (EID) is **M21**. There may be more in the future.

Subject ID is the 4-character code that tells us which subject the data comes from. It should be S followed by the three-digit subject number. So **S201**. In the future, we may also use P for practice/preliminary participants

Task ID is a 3- or 4-character code that tells us which task the data shows. There are 2 tasks in our current M21 experiment; the Lexical Decision Task (**LDT**) and the Visual Statistical Learning task (**VSL**).

Data Type is a 3-character code that tells us the type of data contained in the file. There are two options - **BEH** for behavioral data, i.e. data collected on the experimental computer (think reaction times, responses, etc.) and **EEG** for data collected from BrainVision on the control computer.

When the experiment is over, you should have the following files to upload to Teams:

1. M21_S###_LDT_EEG.vhdr
2. M21_S###_LDT_EEG.vrmk
3. M21_S###_LDT_EEG.eeg
4. M21_S###_VSL_EEG.vhdr
5. M21_S###_VSL_EEG.vrmk
6. M21_S###_VSL_EEG.eeg
7. M21_S###_LDT_BEH.csv
8. M21_S###_VSL_BEH_results
9. M21_S###_VSL_BEH-VSL
